HOW DOES SNOWGLOBE LIVE! WORK?

SnowGlobe Live! is an exciting and safe air supported vinyl snow globe snow globe that allows anyone to enter and experience the magic of being inside! Featuring a patented twin airlock chamber system, **SnowGlobe Live!** only needs to be inflated once for the duration of any event. How does this work? The snow globe sustains air from a hidden blower system underneath the floor of the unit that continuously supplies air pressure and inflates the globe. In addition, the snow globe is divided into two sections split by a special backdrop curtain that you see when looking at the front of the globe. The front section, or main globe, is where the fun happens! A perfect photo op, this area can be staged for the ultimate winter wonderland. Behind the curtain is the actual air chamber and is the transitional space where patrons enter and exit from. Once the entry point is secured, patrons enter the main globe through a special zipped door on the backdrop. The twin airlock chamber system allows for no deflation or pressurizing of the snow globe when entering or exiting. The merriment is endless with **SnowGlobe Live!**
